

FAN SEE

IMPRESSION THAT LAST FOREVER

Wherever you go,
the breeze will follow.

Who We Are?

Fansee was established with the intention of "Breaking the Stereotype" when it comes to home decor since we think that it needs the knowledge to discover the route & bravery to make a difference. The company has adhered to the concept **"Quality first, credit a need, service a mark of your honesty"**.

Fansee fans are designed to gently spread the breeze throughout the entire space, not just underneath the fan. Our fans include features like Summer-Winter mode, Whisper Quite technology, BLDC motor, Sleep mode, Multicolor lights so you experience a natural breeze rather than the air coming from an artificial source. We don't only express what we mean; we also make it happen.

STEP BY STEP **CEILING FAN** **INSTALLATION GUIDE**

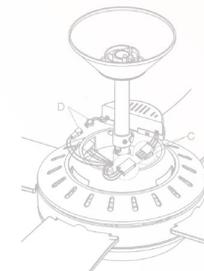

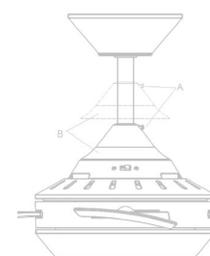

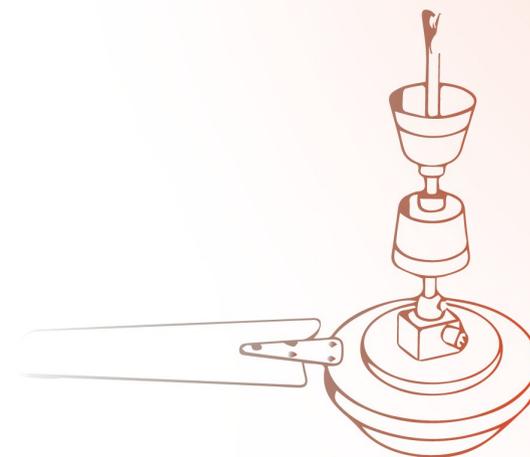

Installation

Safety Rules

- ! Shut the power off at the circuit breaker box before beginning.
- ! Verify there are no obstructions at the installation site.
- ! Use only clamps/rods & hooks which come with the fan.
- ! Read the manufacturer's instructions for additional caution, safety and warning information.

Recommended Tools for Installing ceiling fan

1. Cordless Drill with Long Bit
2. Crescent Wrench
3. Voltage Tester
4. Pliers
5. Screwdrivers
6. Wire Cutters/Strippers
7. Electrician's Tape
8. Ladder
9. Dusk Mask
10. Safety Glasses

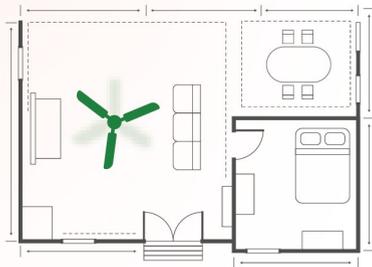

Where to hang a ceiling fan?

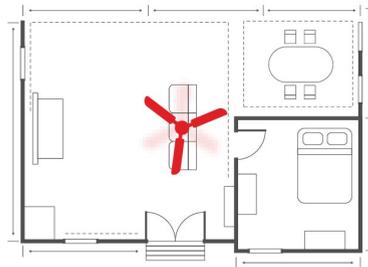

Choosing an installation site is as important as selecting the ceiling fan itself.

The right location ensures your safety as well as the fan's performance and efficiency. When selecting an installation site, consider the following details:

- Always install a ceiling fan in the centre of useable area & not in centre of the room.

Centre of useable area

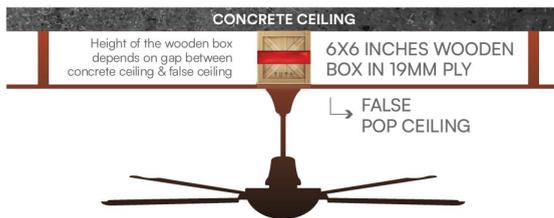

Centre of the area

- Ceiling fans provide optimal airflow when hung at least 7.5 to 9 feet above the floor.
- Ceiling fan blades must hang at least 10 to 12 inches below the ceiling.
- Ceiling fan blades must be at least 24 inches away from wall, doors, cabinets and posts.
- Confirm the location on the ceiling and the surrounding area is not cracked or damaged.

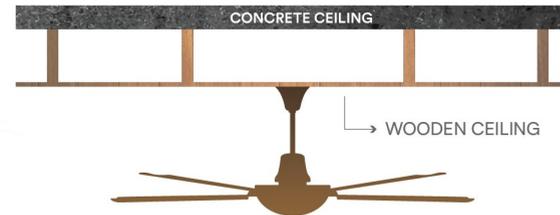

Installation procedure on

False ceiling

- Fix a wooden box between concrete ceiling and the false (gypsum) ceiling, secure the box on the concrete ceiling with screws.
- Install the false ceiling just touching the base of the wooden box.
- Fix the fan on the false ceiling with screws. The screws will fix securely on the wooden box, hence taking the entire weight of the fan.
- Kindly note our controller will sit in the fan cup on the top, hence pre installed rods cannot be used to fix these fans. Designer fans can be fixed only on rods provided by the manufacturer.

Wooden ceiling

- Our fans can be directly installed on a false wooden ceiling.
- A wooden ceiling of minimum 12mm plywood is required to install our fans directly, make sure the wooden ceiling is strong enough to take the weight of the fan.

Concrete ceiling

- Our fans can be directly installed on a concrete ceiling.
- Pre installed rods cannot be used to install designer fans including our fans.
- Our fans can be fixed only on the rods & mounting kit provided along with the fan.
